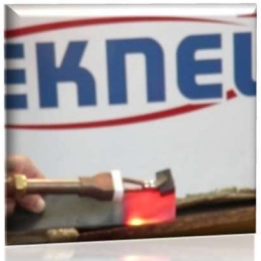
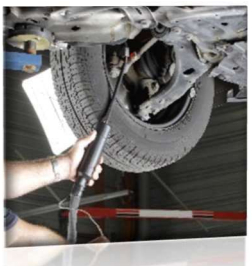
DRAGON 300	Cod. IHD03
3,9 kW	INDUCTION HEATER

Exceptional efficiency induction heater. Compact yet extremely powerful and efficient. It immediately heats the piece, for straightening and releasing **ferrous material or aluminium elements**. The liquid cooling system makes it possible to perform heating jobs for prolonged amounts of time without interruption.
It creates heat directly inside the metal at a depth of 2.5 mm. It can heat a surface area of 30x30mm (thickness 3mm) to red heat (800°C) in just 3 seconds. No naked flames means it is also possible to work near cables, pipes or other heat-sensitive parts. Weighing just 39 kg it is small and convenient, suitable for workshops, body shops and tyre shops.
The machine is equipped with a special **INSULATION TRANSFORMER** that guarantees maximum operator safety, even in the most unexpected conditions.





NEW PATENTED INDUCTORS WITH QUICK CONNECTION

Wide range of patented inductors which increases its efficiency, easy to replace in seconds.
The flux concentrator and the protective cap resistant to high temperatures are blocked without glue.

STANDARD INDUCTOR	*FRONT INDUCTOR*	*ROUND TIP INDUCTOR*	*RING INDUCTOR*
