CAMELEON

PRECISION FIXTURING FOR ANY VEHICLE PLATFORM

Fully customizable jig system engineered to deliver precise, repeatable results across all vehicle types. With 1 mm +/- 1 mm tolerance on the X, Y, and Z axes, it enables exact control over length, width, and height during structural repairs.

Designed for versatility, the Cameleon supports multiple fixing points, including pilot holes, subframe mounts, bumper brackets, and strut tower locations, ensuring accurate alignment throughout the repair process.
